Classification

$$\begin{bmatrix} \text{Andi} \\ \text{Ani} \\ \text{Yanti} \end{bmatrix} = \begin{bmatrix} 0.8 \\ 0.1 \\ 0.1 \end{bmatrix}$$

Regression

Continuous value

What is the important?

<http://introtodeeplearning.com/>

Identifying main feature on Image data

- Nose
- Eyes
- Lips

- Wheels
- Plate Number
- Car Headlight

- ✓ Door
- ✓ Window
- ✓ Chair

Manual Feature Extraction

<http://introtodeeplearning.com/>

Domain Knowledge

Define Feature

Detect feature to classify

Viewpoint Variation

Scale Variation

Deformation

Occlusion

Illumination condition

Background clutter

Intra-class variation

Learning Feature Representation

<http://introtodeeplearning.com/>

Low Level

- Edge
- Dark Spot

Mid Level

- Eye
- Ears
- Nose

High Level

✓ Facial Structure

Hand Engineering? Computationally expensive! a.k.a Annoying!

Can we learn hierarchy of features directly?

Learning Visual Features

Recall, Fully Connected Neural Networks

<https://medium.com/swlh/fully-connected-vs-convolutional-neural-networks-813ca7bc6ee5>

- Connect neuron in hidden layer to all neurons in input layer
- **No spatial Information!**
- **And a bunch of parameters!**

How we can get spatial feature in the input to inform the NNs?

Using Spatial Structure

Input

- 2D image
- Array of pixel values

Idea

Connect patches of inputs to neurons in hidden layer

Concept

Only “looks” those values □

How to connect each patch?

<http://introtodeeplearning.com/>

- Use a *sliding window* in input layer to a single neuron in subsequent layer.
- Add **weights**.
- **How can we** weight the batch to detect particular features?

Applying Filter

<http://introtodeeplearning.com/>

- Apply a set of weights — a **filter** — to extract **local features**
- Use **multiple filters** to extract different features/
- Spatially **share** parameters of each filter

Convolution works!

<http://introtodeeplearning.com/>

- “*Patchy*” operation is **convolution**:
 - Filter of size 4x4 (16 weights)
 - Apply this same filter to 4x4 patches in input
 - Shift by 2 pixels for next patch..

Feature Extraction and Convolution

X or X?

<http://introtodeeplearning.com/>

-1	-1	-1	-1	-1	-1	-1	-1	-1
-1	1	-1	-1	-1	-1	-1	1	-1
-1	-1	1	-1	-1	-1	1	-1	-1
-1	-1	-1	1	-1	1	-1	-1	-1
-1	-1	-1	-1	1	-1	-1	-1	-1
-1	-1	-1	1	-1	1	-1	-1	-1
-1	-1	1	-1	-1	-1	1	-1	-1
-1	1	-1	-1	-1	-1	-1	1	-1
-1	-1	-1	-1	-1	-1	-1	-1	-1

-1	-1	-1	-1	-1	-1	-1	-1	-1
-1	-1	-1	-1	-1	-1	1	-1	-1
-1	1	-1	-1	-1	1	-1	-1	-1
-1	-1	1	1	-1	1	-1	-1	-1
-1	-1	-1	-1	1	-1	-1	-1	-1
-1	-1	-1	1	-1	1	1	-1	-1
-1	-1	-1	1	-1	-1	-1	1	-1
-1	-1	1	-1	-1	-1	-1	-1	-1
-1	-1	-1	-1	-1	-1	-1	-1	-1

We want to be able to classify an X as an X even if it's shifted, shrunk, rotated, deformed

Features of X

<http://intrc>

Filter to detect X features

<http://introtodeeplearning.com/>

filters

1	-1	-1

Feature Map Variation

<http://introtodeeplearning.com/>

Original

Sharpen

Edge Detect

“Strong” Edge Detect

Convolutional Neural Networks

CNN for classification

<http://introtodeeplearning.co>

1. **Convolution**: apply filters to generate *feature map*
2. **Non-linearitas**: usually ReLU
3. **Pooling**: *downsampling* operation on each *feature map*.

 `tf.keras.layers.Conv2D`

 `tf.keras.activations.*`

 `tf.keras.layers.MaxPool2D`

Convolutional Layer: Local Connectivity

<http://introtodeeplearning.com/>

x

$$\sum_{i=1}^4 \sum_{j=1}^4 w_{ij} x_{i+p, j+q} + b$$

For neuron (p, q) in hidden layer

Volume luaran terkait Spasial

<http://introtodeeplearning.com/>

Layer Dimension: $h \times w \times d$

h and w are spatial dimensions, d

Is number of filters

Stride: Filter step size

Receptive field: Location in input image that a node is path connected to

```
tf.keras.layers.Conv2D( filters=d, kernel_size=(h,w), strides=s )
```

Non-linearity and *Pooling*

What is non-linearity?

What is Pooling?

- Reduce dimensionality
- *Spatial Invariance*

end-to-end code

Put all together

```
import tensorflow as tf

def generate_model():
    model = tf.keras.Sequential([
        # first convolutional layer
        tf.keras.layers.Conv2D(32, filter_size=3, activation='relu'),
        tf.keras.layers.MaxPool2D(pool_size=2, strides=2),

        # second convolutional layer
        tf.keras.layers.Conv2D(64, filter_size=3, activation='relu'),
        tf.keras.layers.MaxPool2D(pool_size=2, strides=2),

        # fully connected classifier
        tf.keras.layers.Flatten(),
        tf.keras.layers.Dense(1024, activation='relu'),
        tf.keras.layers.Dense(10, activation='softmax') # 10 outputs
    ])
    return model
```
